FOR IMMEDIATE RELEASE

GZ Media announce that they have successfully completed the development of a new vinyl press. It is good news for fans of the fastest growing music format – vinyl records.

Lodenice, CZECH REPUBLIC, December 18, 2014 - In the early 90's, vinyl record production was in decline. Now the Czech Republic based vinyl record manufacturer GZ Media announces it has finished development and the successful deployment of a new vinyl press - the first new press to be created in 30 years.

Vinyl is the fastest growing music format. Who could foresee it 10 years ago? Vinyl record departments in music stores all over the world are now booming. Music fans are questioning shop assistants about new releases as well as about archive titles.

"Now it's going to change" says Michal Sterba, CEO of GZ Media. "In the last two years we have seen 30-40% annual growth of demand for vinyl records. This year we have sold 100% of our production capacities. The development of this new press will allow us nearly double our production capacity in 2015".

GZ Media has manufactured vinyl records since 1951. The company's specialty is colored vinyl and bespoke vinyl packaging. With 14 million records produced in 2014 GZ Media is the largest manufacturer of vinyl records in the world.
